1) Manufacturer
Manufacturer knows all the elements or ingredients used while manufacturing a hardware, which is later e-waste. and hence he can responsible avoid/minimize its usage.

2) Consumer
A layman is generally unaware about the composition of the electronic device and his relation is only with usage and not Production. However, if made aware, he/she can be a responsible user and choose wisely while dumping waste frequently and reuse/recycle it.

3) Informed recycler
This is the one who can create impact by recycling the waste thereby reducing it and also ~~gener~~ creating awareness amongst citizens.

4) Soil
All the metals/e-waste are later went to soil and it is one of the most affected resource. It deteriorates its quality and makes in affected in different ways as also unfertile.
